Automatic Up-packing Strapping System

Featuring the M-634Z strapping head

SIGNODE QUICK-CHANGE

Revolution

Signode's fully automatic up-packing strapping system is designed to reduce maintenance costs and accommodate faster production speeds. Featuring a modular design that simplifies maintenance, the system is simple to operate and easy to maintain, maximizing productivity and decreasing downtime.

Feed and take-up module

Sealing module

The M-634Z system features a separate feed/take-up module and sealing module. All modules are lightweight, easy to access and slide out quickly for routine maintenance, minimizing downtime. Modules can be removed and replaced between bales, enabling operators to perform maintenance while continuing to operate at full capacity.

- Designed specifically for baling operations
- All-electric operation
- Simple design with no belts or clutches
- Patented Z-weld sealless joint approved by the National Cotton Council

Minimize downtime

The Revolution up-packing strapping system is equipped with automatic refeed. This feature automatically attempts to refeed the strap up to three times when an obstruction is impeding the strap feeding process.

Maximize productivity

The Revolution up-packing strapping system can apply up to six straps simultaneously, eliminating the indexing time needed to apply multiple straps. This timesaving feature, combined with a cycle time as short as 10 seconds, maximizes productivity and efficiency.
